

CoARA Action Plan

European Network for Research Evaluation in the Social Sciences and Humanities

ENRESSH AND RESEARCH EVALUATION

ENRESSH was founded under the name EvalHum in 2014 after having organised a series of conferences and workshops on improving research evaluation with a special focus on better valorising research and its impact on society. A special goal was the recognition of research of the social sciences, humanities and arts (SSH) and their inclusion in Horizon Europe.

The association has received funding for conferences and finally also for a COST-Action called ENRESSH. The COST-Action was a big success, having a broad membership and strong recognition among policy makers in improving evaluation procedures. After the life of the COST-Action, the association EvalHum was renamed to ENRESSH.

ENRESSH'S MISSION ACCORDING TO THE STATUTES

The purpose of the Association is to encourage, promote and coordinate studies and researches into the evaluation of the SSH, in all its aspects: quality representations, bibliometric studies, qualitative analysis, intra and extra-academic impact, societal role, uses and effects of evaluations, etc. It particularly takes as its mission to serve, at an international level, as a network of all kinds of stakeholders involved in research evaluation with a special focus on the Social Sciences, Humanities and Arts with the aim to improve research evaluation in the Social Sciences, Humanities and Arts and beyond. The association's credo is to support and integrate the diversity in views and voices of all stakeholders, disciplines, and countries and to thus promote a pluralist approach to research evaluation.

PAST AND CURRENT ACTIONS

ENRESSH and CoARA

ENRESSH's mission since its inception in 2014 clearly is in line with the CoARA commitments, in fact, ENRESSH has been for the SSH what CoARA is to be for all disciplines: On the one hand a group of persons and institutions who commit to improve evaluation practices with the goal to enhance diversity in all aspects of research. On the other it is an association that brings together different stakeholders to change evaluation practice on the basis of current innovations and best practices, to which ENRESSH members continuously contribute.

Therefore, ENRESSH has taken part in CoARA from the first

stakeholder meeting and has immediately committed to the following actions:

Raise awareness for the need of reform of assessment

1. ENRESSH continues to actively raise awareness for the need of reform of research assessment procedures on the national, European and international level.

2. ENRESSH informs its members about advances, events and work groups of CoARA and regularly updates its members about CoARA findings, outputs and communications.

3. ENRESSH provides its members the opportunity to participate in CoARA activities if they cannot represent their own organisations.

Inform CoARA and its WGs on ENRESSH findings and activities

4. ENRESSH's activities are relevant for many CoARA Working Groups and CoARA in general. ENRESSH will share its knowledge within CoARA Working Groups and will inform relevant CoARA partners about ENRESSH events.

5. ENRESSH will reflect on how to generalise its findings developed mainly for SSH disciplines to other fields of research.

Provide feedback and give advice on CoARA outputs and briefs

6. ENRESSH will provide feedback on CoARA outputs and policy briefs in its fields of specialisation.

7. ENRESSH will also be ready to give advice on how to improve evaluation procedures to better reflect the diversity of research outputs and knowledge generation processes.

LONG-TERM ACTIONS

Working Group on SSH

8. ENRESSH's specialisation is the evaluation of SSH research. ENRESSH will team up with other stakeholders, in particular EASSH, in a CoARA Working Group on SSH evaluation.

Active participation in CoARA Activities

9. As ENRESSH's main mission is to improve evaluation procedures, ENRESSH will actively participate in CoARA activities and will give input on the implementation of the principles when needed.
